

## Voyage-Air: New Transit Series Guitars

### Voyage-Air redefines the Affordable Folding Travel Guitar!

**Livermore, CA - January 15, 2010** - Established as the leader in folding travel guitars, Voyage-Air Guitar has completely dominated the mid-price acoustic travel guitar category with the Songwriter™ Series guitars. It also is the undisputed champ of the high-end acoustic class of travel guitars, with the all-solid wood Voyage-Air Premiere Series guitars.

Today, Voyage-Air Guitar shatters the entry-level price barriers with the breakthrough Voyage-Air Transit™ Series guitars. **Priced at just \$399**, almost anyone can afford an easy to play, great-sounding folding travel guitar.

The Transit Series guitars employ the *exact same patented hinge* as used on all Voyage-Air guitars, on up through the \$1,995 VAOM-2C Premiere Series guitar. This is the same hinge as the guitars used **on stage** by pop icons **Steve Miller**, and Rusty Anderson with the **Paul McCartney Band**.

The Transit Series guitars use a high-gloss select Mahogany for the back and sides, along with a smooth satin-finish Mahogany neck and Rosewood fingerboard. The elegant High-gloss Spruce top is supported by forward-shifted X-bracing. All Transit Series guitars feature single-ply black top and back binding, and an inlaid soundhole rosette.

Two configurations are available for the first Transit Series guitars:

The [VAOM-02](#) flatters finger-style playing, with a full-size 'OM-style' guitar body, a traditional 1-  $\frac{3}{4}$ " nut width and 25.5" scale length.

The [VAMD-02](#) is designed for strumming and chords, with a slightly-reduced 95%-size 'Dreadnought' guitar body. The neck and scale are still full-size, with a 1-11/16" nut width and a 24.5" scale length.

All Transit Series guitars have standard features usually found on far more expensive instruments: 'dot' inlay fret markers, a compensated saddle, the patented Voyage-Air captured nut, advanced zero-fret fingerboard, chrome-plated die-cast enclosed tuners, phosphor-bronze strings, and a distinctive black pickguard. The optional **TransitBag™** case is also slimmer and lighter than other Voyage-Air guitars: indeed, these are the most compact full-size acoustic folding travel guitars!

"These are the kind of products that we can now produce based on solid market experience," said Michael Ferrucci, Vice-President of Sales and Marketing for Voyage-Air Guitar. "These guitars are easy to play, have a rich tone, and are priced so you can really take them anywhere. Never again worry about taking a guitar hiking, camping or on a trip. Take a Transit with you on your next adventure!"

More information is available NOW at the Voyage-Air Guitar website: [www.voyageairguitar.com](http://www.voyageairguitar.com).

Come see all the amazing new Voyage-Air Guitar models at NAMM in Hall E, Booth #1525!

Sincerely,

**The Voyage-Air Team**
